- **Basic algebras** = bounded lattices with sectional antitone involutions.

$$\neg x := \gamma_0(x)$$

$$x \oplus y := \gamma_y(\neg x \vee y)$$

- **Basic algebras** = algebras $(A, \oplus, \neg, 0)$ of type $(2, 1, 0)$ satisfying the identities

$$x \oplus 0 = x,$$

$$\neg \neg x = x,$$

$$\neg(\neg x \oplus y) \oplus y = \neg(\neg y \oplus x) \oplus x,$$

$$\neg(\neg(\neg(x \oplus y) \oplus y) \oplus z) \oplus (x \oplus z) = \neg 0.$$

Basic algebras

Recallings

$$\neg(\neg(\neg(x \oplus y) \oplus y) \oplus z) \oplus (x \oplus z) = \neg 0.$$

Problem

Find an associative basic algebra that is not commutative.

- M. Kolařík:

*Every associative basic algebra is commutative,
i.e., MV-algebras are just associative basic algebras.*

Definition

An **effect algebra** is a structure $(E, +, 0, 1)$ where $0, 1$ are elements of E and $+$ is a partial binary operation on E , satisfying the following conditions:

(EA1) $x + y = y + x$ if one side is defined,

(EA2) $x + (y + z) = (x + y) + z$ if one side is defined,

(EA3) for every x there exists a unique x' such that $x' + x = 1$,

(EA4) $x + 1$ is defined only for $x = 0$.

The underlying order:

$$x \leq y \quad \text{iff} \quad y = x + z \text{ for some } z;$$

this z is denoted by $y - x$.

Definition

An **effect algebra** is a structure $(E, +, 0, 1)$ where $0, 1$ are elements of E and $+$ is a partial binary operation on E , satisfying the following conditions:

(EA1) $x + y = y + x$ if one side is defined,

(EA2) $x + (y + z) = (x + y) + z$ if one side is defined,

(EA3) for every x there exists a unique x' such that $x' + x = 1$,

(EA4) $x + 1$ is defined only for $x = 0$.

The underlying order:

$$x \leq y \quad \text{iff} \quad y = x + z \text{ for some } z;$$

this z is denoted by $y - x$.

Definition

A **D-poset** is a structure $(D, \leq, -, 0, 1)$ where $(D, \leq, 0, 1)$ is a bounded poset and $-$ is a partial binary operation such that $x - y$ is defined iff $x \geq y$, satisfying the conditions

$$(DP1) \quad x - 0 = x,$$

$$(DP2) \quad \text{if } x \leq y \leq z, \text{ then } z - y \leq z - x \text{ and} \\ (z - x) - (z - y) = y - x.$$

To a D-poset $(D, \leq, -, 0, 1)$ there corresponds the effect algebra $(D, +, 0, 1)$ obtained by letting

$$x + y := z \quad \text{iff} \quad z \geq y \text{ and } z - y = x.$$

Lattice effect algebras/D-lattices are those with the underlying lattice order.

Definition

A **D-poset** is a structure $(D, \leq, -, 0, 1)$ where $(D, \leq, 0, 1)$ is a bounded poset and $-$ is a partial binary operation such that $x - y$ is defined iff $x \geq y$, satisfying the conditions

$$(DP1) \quad x - 0 = x,$$

$$(DP2) \quad \text{if } x \leq y \leq z, \text{ then } z - y \leq z - x \text{ and} \\ (z - x) - (z - y) = y - x.$$

To a D-poset $(D, \leq, -, 0, 1)$ there corresponds the effect algebra $(D, +, 0, 1)$ obtained by letting

$$x + y := z \quad \text{iff} \quad z \geq y \text{ and } z - y = x.$$

Lattice effect algebras/D-lattices are those with the underlying lattice order.

Definition

A **D-poset** is a structure $(D, \leq, -, 0, 1)$ where $(D, \leq, 0, 1)$ is a bounded poset and $-$ is a partial binary operation such that $x - y$ is defined iff $x \geq y$, satisfying the conditions

$$(DP1) \quad x - 0 = x,$$

To a D-poset $(D, \leq, -, 0, 1)$ there corresponds the effect algebra $(D, +, 0, 1)$ obtained by letting

$$x + y := z \quad \text{iff} \quad z \geq y \text{ and } z - y = x.$$

Lattice effect algebras/D-lattices are those with the underlying lattice order.

Lattice effect algebras and D-lattices

... as basic algebras

In each effect algebra/D-poset:

- $x \mapsto x' + a$ is an antitone involution on $[a, 1]$,
- $x \mapsto a - x$ is an antitone involution on $[0, a]$.

Hence lattice effect algebras/D-lattices are basic algebras:

Theorem

Let $(E, +, 0, 1)$ be a lattice effect algebra. If we set

$$x \oplus y := (x \wedge y') + y \quad \text{and} \quad \neg x := x',$$

then $(E, \oplus, \neg, 0)$ is a basic algebra.

Proof: $x \oplus y := (x^0 \vee y)^y = (x' \vee y)' + y = (x \wedge y') + y$.

Lattice effect algebras and D-lattices

... as basic algebras

In each effect algebra/D-poset:

- $x \mapsto x' + a$ is an antitone involution on $[a, 1]$,
- $x \mapsto a - x$ is an antitone involution on $[0, a]$.

Hence lattice effect algebras/D-lattices are basic algebras:

Theorem

Let $(E, +, 0, 1)$ be a lattice effect algebra. If we set

$$x \oplus y := (x \wedge y') + y \quad \text{and} \quad \neg x := x',$$

then $(E, \oplus, \neg, 0)$ is a basic algebra.

Proof: $x \oplus y := (x^0 \vee y)^y = (x' \vee y)' + y = (x \wedge y') + y$.

Lattice effect algebras and D-lattices

... as basic algebras

In each effect algebra/D-poset:

- $x \mapsto x' + a$ is an antitone involution on $[a, 1]$,
- $x \mapsto a - x$ is an antitone involution on $[0, a]$.

Hence lattice effect algebras/D-lattices are basic algebras:

Theorem

Let $(E, +, 0, 1)$ be a lattice effect algebra. If we set

$$x \oplus y := (x \wedge y') + y \quad \text{and} \quad \neg x := x',$$

then $(E, \oplus, \neg, 0)$ is a basic algebra.

Proof: $x \oplus y := (x^0 \vee y)^y = (x' \vee y)' + y = (x \wedge y') + y$.

Lattice effect algebras and D-lattices

... as basic algebras

In the basic algebra $(E, \oplus, \neg, 0)$ associated to $(E, +, 0, 1)$ we have:

- $x \ominus y := \neg(y \oplus \neg x) = x - (x \wedge y)$;
- $x - y = x \ominus y$ for $x \geq y$;
- $x + y = x \oplus y$ for $x \leq \neg y$.

Lattice effect algebras and D-lattices

... as basic algebras

Which basic algebras are derived from lattice effect algebras?

Theorem

Let $(A, \oplus, \neg, 0)$ be a basic algebra, and define the partial operation $+$ as follows:

$x + y$ is defined iff $x \leq \neg y$, in which case $x + y := x \oplus y$.

Then $(A, +, 0, 1)$ is a lattice effect algebra if and only if $(A, \oplus, \neg, 0)$ satisfies the quasi-identity

$$x \leq \neg y \quad \& \quad x \oplus y \leq \neg z \quad \Rightarrow \quad (x \oplus y) \oplus z = x \oplus (z \oplus y). \quad (\text{E})$$

For $x = 0$ we have

$$y \leq \neg z \quad \Rightarrow \quad y \oplus z = z \oplus y.$$

Lattice effect algebras and D-lattices

... as basic algebras

Which basic algebras are derived from lattice effect algebras?

Theorem

Let $(A, \oplus, \neg, 0)$ be a basic algebra, and define the partial operation $+$ as follows:

$x + y$ is defined iff $x \leq \neg y$, in which case $x + y := x \oplus y$.

Then $(A, +, 0, 1)$ is a lattice effect algebra if and only if $(A, \oplus, \neg, 0)$ satisfies the quasi-identity

$$x \leq \neg y \quad \& \quad x \oplus y \leq \neg z \quad \Rightarrow \quad (x \oplus y) \oplus z = x \oplus (z \oplus y). \quad (\text{E})$$

For $x = 0$ we have

$$y \leq \neg z \quad \Rightarrow \quad y \oplus z = z \oplus y.$$

Lattice effect algebras and D-lattices

... as basic algebras

Which basic algebras are derived from lattice effect algebras?

Theorem

Let $(A, \oplus, \neg, 0)$ be a basic algebra, and define the partial operation $+$ as follows:

$x + y$ is defined iff $x \leq \neg y$, in which case $x + y := x \oplus y$.

Then $(A, +, 0, 1)$ is a lattice effect algebra if and only if $(A, \oplus, \neg, 0)$ satisfies the quasi-identity

$$x \leq \neg y \quad \& \quad x \oplus y \leq \neg z \quad \Rightarrow \quad (x \oplus y) \oplus z = x \oplus (z \oplus y). \quad (\text{E})$$

For $x = 0$ we have

Lattice effect algebras and D-lattices

... as basic algebras

Which basic algebras are derived from lattice effect algebras?

Theorem

Let $(A, \oplus, \neg, 0)$ be a basic algebra, and define the partial operation $+$ as follows:

$x + y$ is defined iff $x \leq \neg y$, in which case $x + y := x \oplus y$.

Then $(A, +, 0, 1)$ is a lattice effect algebra if and only if $(A, \oplus, \neg, 0)$ satisfies the quasi-identity

$$x \leq \neg y \quad \& \quad x \oplus y \leq \neg z \quad \Rightarrow \quad (x \oplus y) \oplus z = x \oplus (z \oplus y). \quad (\text{E})$$

For $x = 0$ we have

$$y \leq \neg z \quad \Rightarrow \quad y \oplus z = z \oplus y.$$

Lattice effect algebras and D-lattices

... as basic algebras

Theorem

Let $(A, \oplus, \neg, 0)$ be a basic algebra, and define the partial operation $-$ as follows:

$x - y$ is defined iff $x \geq y$, in which case $x - y := x \ominus y$.

Then $(A, \leq, -, 0, 1)$ is a D-lattice if and only if $(A, \oplus, \neg, 0)$ satisfies the quasi-identity

$$x \leq y \leq z \quad \Rightarrow \quad (z \ominus x) \ominus (z \ominus y) = y \ominus x. \quad (E')$$

Definition

We call a basic algebra an **effect basic algebra** if it satisfies (E) (equivalently, (E')).

Effect basic algebras (= lattice effect algebras = D-lattices) form a variety. This variety is

- congruence regular and arithmetical;
- an ideal variety; the ideal terms (in y 's) are

$$t_1(x, y_1, y_2) = x \wedge (y_1 \oplus y_2),$$

$$t_2(x, y) = \neg x \ominus \neg y.$$

Effect basic algebras

Compatibility and commutativity

In a lattice effect algebra, two elements x, y are **compatible** if

$$(x \vee y) - y = x - (x \wedge y).$$

Theorem

Let $(E, \oplus, \neg, 0)$ be an effect basic algebra and $(E, +, 0, 1)$ the associated lattice effect algebra. Then $x, y \in E$ are compatible iff $x \oplus y = y \oplus x$.

Theorem

For every effect basic algebra E , the following are equivalent:

- 1 E is an MV-algebra;
- 2 E is commutative;
- 3 E satisfies the RDP.

Effect basic algebras

Compatibility and commutativity

In a lattice effect algebra, two elements x, y are **compatible** if

$$(x \vee y) - y = x - (x \wedge y).$$

Theorem

Let $(E, \oplus, \neg, 0)$ be an effect basic algebra and $(E, +, 0, 1)$ the associated lattice effect algebra. Then $x, y \in E$ are compatible iff $x \oplus y = y \oplus x$.

Theorem

For every effect basic algebra E , the following are equivalent:

- 1 E is an MV-algebra;
- 2 E is commutative;
- 3 E satisfies the RDP.

Effect basic algebras

Compatibility and commutativity

In a lattice effect algebra, two elements x, y are **compatible** if

$$(x \vee y) - y = x - (x \wedge y).$$

Theorem

Let $(E, \oplus, \neg, 0)$ be an effect basic algebra and $(E, +, 0, 1)$ the associated lattice effect algebra. Then $x, y \in E$ are compatible iff $x \oplus y = y \oplus x$.

Theorem

For every effect basic algebra E , the following are equivalent:

- 1 E is an MV-algebra;
- 2 E is commutative;
- 3 E satisfies the RDP.

Effect basic algebras

Compatibility and commutativity

A **block** is a maximal subset whose elements commute.
The **MV-centre** is the intersection of the blocks.

Theorem

For every basic algebra E , the following are equivalent:

- 1 E is an effect basic algebra;
- 2 every block of E is a subalgebra which itself is an MV-algebra.

Theorem

Let E be an effect basic algebra. If E is subdirectly irreducible, then its MV-centre $MV(E)$ is a subdirectly irreducible MV-algebra (hence $MV(E)$ is linearly ordered).

Effect basic algebras

Compatibility and commutativity

A **block** is a maximal subset whose elements commute.
The **MV-centre** is the intersection of the blocks.

Theorem

For every basic algebra E , the following are equivalent:

- 1 E is an effect basic algebra;
- 2 every block of E is a subalgebra which itself is an MV-algebra.

Theorem

Let E be an effect basic algebra. If E is subdirectly irreducible, then its MV-centre $MV(E)$ is a subdirectly irreducible MV-algebra (hence $MV(E)$ is linearly ordered).

Effect basic algebras

Compatibility and commutativity

A **block** is a maximal subset whose elements commute.
The **MV-centre** is the intersection of the blocks.

Theorem

For every basic algebra E , the following are equivalent:

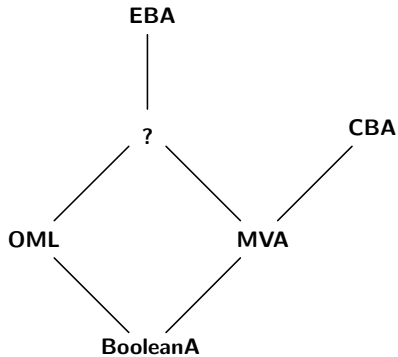

- 1 E is an effect basic algebra;
- 2 every block of E is a subalgebra which itself is an MV-algebra.

Theorem

Let E be an effect basic algebra. If E is subdirectly irreducible, then its MV-centre $MV(E)$ is a subdirectly irreducible MV-algebra (hence $MV(E)$ is linearly ordered).

Effect basic algebras

Some varieties

Basic algebras

Example 1

The smallest effect basic algebra which is neither an OML nor an MV-algebra:

| \oplus | 0 | <i>a</i> | <i>b</i> | 1 | \neg |
|----------|----------|----------|----------|---|----------|
| 0 | 0 | <i>a</i> | <i>b</i> | 1 | 1 |
| <i>a</i> | <i>a</i> | 1 | <i>b</i> | 1 | <i>a</i> |
| <i>b</i> | <i>b</i> | <i>a</i> | 1 | 1 | <i>b</i> |
| 1 | 1 | 1 | 1 | 1 | 0 |

Theorem

The variety generated by the basic algebra from Example 1 is axiomatized, relative to the variety of distributive EBA's, by the identity

$$(x \ominus y) \ominus (z \oplus z) = (x \ominus (z \oplus z)) \ominus (y \ominus (z \oplus z)).$$

Basic algebras

Example 1

The smallest effect basic algebra which is neither an OML nor an MV-algebra:

| + | 0 | a | b | 1 | ' |
|---|---|---|---|---|---|
| 0 | 0 | a | b | 1 | 1 |
| a | a | 1 | × | × | a |
| b | b | × | 1 | × | b |
| 1 | 1 | × | × | × | 0 |

Theorem

The variety generated by the basic algebra from Example 1 is axiomatized, relative to the variety of distributive EBA's, by the identity

$$(x \ominus y) \ominus (z \oplus z) = (x \ominus (z \oplus z)) \ominus (y \ominus (z \oplus z)).$$

Basic algebras

Example 1

The smallest effect basic algebra which is neither an OML nor an MV-algebra:

| \oplus | 0 | a | b | 1 | \neg |
|----------|---|---|---|---|--------|
| 0 | 0 | a | b | 1 | 1 |
| a | a | 1 | b | 1 | a |
| b | b | a | 1 | 1 | b |
| 1 | 1 | 1 | 1 | 1 | 0 |

Theorem

The variety generated by the basic algebra from Example 1 is axiomatized, relative to the variety of distributive EBA's, by the identity

$$(x \ominus y) \ominus (z \oplus z) = (x \ominus (z \oplus z)) \ominus (y \ominus (z \oplus z)).$$

Cantor-Bernstein theorem

Boolean algebras and MV-algebras

- Let A and B be σ -complete Boolean algebras. If A is isomorphic to $[0, b] \subseteq B$ and B is isomorphic to $[0, a] \subseteq A$, then $A \cong B$.
- Let A and B be σ -complete MV-algebras. If A is isomorphic to $[0, b] \subseteq B$ and B is isomorphic to $[0, a] \subseteq A$ where a, b are complemented elements, then $A \cong B$.

Cantor-Bernstein theorem

Boolean algebras and MV-algebras

- Let A and B be σ -complete Boolean algebras. If A is isomorphic to $[0, b] \subseteq B$ and B is isomorphic to $[0, a] \subseteq A$, then $A \cong B$.
- Let A and B be σ -complete MV-algebras. If A is isomorphic to $[0, b] \subseteq B$ and B is isomorphic to $[0, a] \subseteq A$ where a, b are complemented elements, then $A \cong B$.

Cantor-Bernstein theorem

Central elements

Definition

We say that $a \in A$ is a **central element** in a basic algebra A if

$$a = f^{-1}(0, 1) \quad \text{or} \quad a = f^{-1}(1, 0)$$

for some direct product decomposition $f: A \cong A_1 \times A_2$.

The **centre** of A , $C(A)$, is the set of all central elements.

Cantor-Bernstein theorem

Central elements

- $C(A)$ is a subalgebra of A and a Boolean algebra in its own right.
- If A is a commutative basic algebra, then $a \in C(A)$ iff a is complemented iff $\neg a$ is a complement of a .
- If A is an effect basic algebra, then $a \in C(A)$ iff $\neg a$ is a complement of a and $a \in MV(A)$.

Cantor-Bernstein type theorem

Let A, B be basic algebras satisfying *certain conditions*. If

- $A \cong [0, b] \subseteq B$ for some $b \in C(B)$ and
- $B \cong [0, a] \subseteq A$ for some $a \in C(A)$,

then $A \cong B$.

Cantor-Bernstein theorem

Central elements

- $C(A)$ is a subalgebra of A and a Boolean algebra in its own right.
- If A is a commutative basic algebra, then $a \in C(A)$ iff a is complemented iff $\neg a$ is a complement of a .
- If A is an effect basic algebra, then $a \in C(A)$ iff $\neg a$ is a complement of a and $a \in MV(A)$.

Cantor-Bernstein type theorem

Let A, B be basic algebras satisfying *certain conditions*. If

- $A \cong [0, b] \subseteq B$ for some $b \in C(B)$ and
- $B \cong [0, a] \subseteq A$ for some $a \in C(A)$,

then $A \cong B$.

Cantor-Bernstein theorem

Let \mathcal{K} be a \mathcal{K} -congruence distributive quasivariety. We shall say that an algebra $A \in \mathcal{K}$ satisfies the condition \mathcal{P} if for every countable set $\{\theta_i \mid i \in I\}$ of factor \mathcal{K} -congruences of A such that $\theta_j \circ \theta_k = \nabla_A$ for all $j \neq k$, the congruence

$$\theta_\infty := \bigcap_{i \in I} \theta_i$$

is a factor \mathcal{K} -congruence of A and

$$A/\theta_\infty \cong \prod_{i \in I} A/\theta_i.$$

Theorem

Let A and B be two algebras in \mathcal{K} satisfying the condition \mathcal{P} . If

$$A \cong B \times C \quad \text{and} \quad B \cong A \times D$$

for some $C, D \in \mathcal{K}$, then $A \cong B$.

Cantor-Bernstein theorem

Let \mathcal{K} be a \mathcal{K} -congruence distributive quasivariety. We shall say that an algebra $A \in \mathcal{K}$ satisfies the condition \mathcal{P} if for every countable set $\{\theta_i \mid i \in I\}$ of factor \mathcal{K} -congruences of A such that $\theta_j \circ \theta_k = \nabla_A$ for all $j \neq k$, the congruence

$$\theta_\infty := \bigcap_{i \in I} \theta_i$$

is a factor \mathcal{K} -congruence of A and

$$A/\theta_\infty \cong \prod_{i \in I} A/\theta_i.$$

Theorem

Let A and B be two algebras in \mathcal{K} satisfying the condition \mathcal{P} . If

$$A \cong B \times C \quad \text{and} \quad B \cong A \times D$$

for some $C, D \in \mathcal{K}$, then $A \cong B$.

Lemma

Let $A \in \mathcal{K}$ and ϕ be a factor \mathcal{K} -congruence of A . Then $\theta \supseteq \phi$ is a factor \mathcal{K} -congruence of A if and only if θ/ϕ is a factor \mathcal{K} -congruence of A/ϕ .

Lemma

Let $A \in \mathcal{K}$. If A satisfies \mathcal{P} , then so does A/ϕ for every factor \mathcal{K} -congruence ϕ of A .

Lemma

Let $A \in \mathcal{K}$ and ϕ be a factor \mathcal{K} -congruence of A . Then $\theta \supseteq \phi$ is a factor \mathcal{K} -congruence of A if and only if θ/ϕ is a factor \mathcal{K} -congruence of A/ϕ .

Lemma

Let $A \in \mathcal{K}$. If A satisfies \mathcal{P} , then so does A/ϕ for every factor \mathcal{K} -congruence ϕ of A .

Lemma

Let $A \in \mathcal{K}$ satisfy the condition \mathcal{P} . Let $\theta_1 \subseteq \theta_2$ be factor \mathcal{K} -congruences of A . If $A \cong A/\theta_2$, then $A \cong A/\theta_1$.

Proof: We construct the sequence $\theta_0 \subseteq \theta_1 \subseteq \theta_2 \subseteq \theta_3 \subseteq \dots$ of factor \mathcal{K} -congruences of A so that $A/\theta_n \cong A/\theta_{n+2}$ for all $n \in \mathbb{N}_0$:

- $\theta_0 := \Delta_A$ and $\theta_1 \subseteq \theta_2$ are the initial congruences;
- Once $\theta_0 \subseteq \theta_1 \subseteq \dots \subseteq \theta_{n-1}$ ($n \geq 3$) satisfying $A/\theta_i \cong A/\theta_{i+2}$ for all $i = 0, 1, \dots, n-3$ are given, the congruence θ_n is defined by the rule

$$\theta_n/\theta_{n-1} = f(\theta_{n-2}/\theta_{n-3})$$

where $f: A/\theta_{n-3} \cong A/\theta_{n-1}$.

Skipping trivialities, we have $\theta_0 \subset \theta_1 \subset \dots \subset \theta_{n-1} \subset \theta_n \subset \dots$

Lemma

Let $A \in \mathcal{K}$ satisfy the condition \mathcal{P} . Let $\theta_1 \subseteq \theta_2$ be factor \mathcal{K} -congruences of A . If $A \cong A/\theta_2$, then $A \cong A/\theta_1$.

Proof: We construct the sequence $\theta_0 \subseteq \theta_1 \subseteq \theta_2 \subseteq \theta_3 \subseteq \dots$ of factor \mathcal{K} -congruences of A so that $A/\theta_n \cong A/\theta_{n+2}$ for all $n \in \mathbb{N}_0$:

- $\theta_0 := \Delta_A$ and $\theta_1 \subseteq \theta_2$ are the initial congruences;
- Once $\theta_0 \subseteq \theta_1 \subseteq \dots \subseteq \theta_{n-1}$ ($n \geq 3$) satisfying $A/\theta_i \cong A/\theta_{i+2}$ for all $i = 0, 1, \dots, n-3$ are given, the congruence θ_n is defined by the rule

$$\theta_n/\theta_{n-1} = f(\theta_{n-2}/\theta_{n-3})$$

where $f: A/\theta_{n-3} \cong A/\theta_{n-1}$.

Skipping trivialities, we have $\theta_0 \subset \theta_1 \subset \dots \subset \theta_{n-1} \subset \theta_n \subset \dots$

Cantor-Bernstein theorem

For every $n \in \mathbb{N}_0$, let ϕ_n/θ_n be the complement $(\theta_{n+1}/\theta_n)^*$ of θ_{n+1}/θ_n in the lattice $\text{Con}_{\mathcal{K}}(A/\theta_n)$. Then ϕ_n is a factor \mathcal{K} -congruence of A . Under the isomorphism $A/\theta_n \cong A/\theta_{n+2}$, ϕ_n/θ_n corresponds to ϕ_{n+2}/θ_{n+2} . Hence

$$A/\phi_n \cong (A/\theta_n)/(\phi_n/\theta_n) \cong (A/\theta_{n+2})/(\phi_{n+2}/\theta_{n+2}) \cong A/\phi_{n+2}.$$

It is easily seen that $\phi_j \circ \phi_k = \nabla_A$ for all $j \neq k$. Now, the property \mathcal{P} implies that $\phi_\infty := \bigcap_{n \in \mathbb{N}_0} \phi_n$ is a factor \mathcal{K} -congruence of A and

$$A/\phi_\infty \cong \prod_{n \in \mathbb{N}_0} A/\phi_n \cong A/\phi_0 \times A/\phi_1 \times A/\phi_0 \times A/\phi_1 \times \dots,$$

whence

$$A \cong A/\phi_\infty^* \times A/\phi_\infty \cong A/\phi_\infty^* \times A/\phi_0 \times A/\phi_1 \times A/\phi_0 \times A/\phi_1 \times \dots$$

Cantor-Bernstein theorem

For every $n \in \mathbb{N}_0$, let ϕ_n/θ_n be the complement $(\theta_{n+1}/\theta_n)^*$ of θ_{n+1}/θ_n in the lattice $\text{Con}_{\mathcal{K}}(A/\theta_n)$. Then ϕ_n is a factor \mathcal{K} -congruence of A . Under the isomorphism $A/\theta_n \cong A/\theta_{n+2}$, ϕ_n/θ_n corresponds to ϕ_{n+2}/θ_{n+2} . Hence

$$A/\phi_n \cong (A/\theta_n)/(\phi_n/\theta_n) \cong (A/\theta_{n+2})/(\phi_{n+2}/\theta_{n+2}) \cong A/\phi_{n+2}.$$

It is easily seen that $\phi_j \circ \phi_k = \nabla_A$ for all $j \neq k$. Now, the property \mathcal{P} implies that $\phi_\infty := \bigcap_{n \in \mathbb{N}_0} \phi_n$ is a factor \mathcal{K} -congruence of A and

$$A/\phi_\infty \cong \prod_{n \in \mathbb{N}_0} A/\phi_n \cong A/\phi_0 \times A/\phi_1 \times A/\phi_0 \times A/\phi_1 \times \dots,$$

whence

$$A \cong A/\phi_\infty^* \times A/\phi_\infty \cong A/\phi_\infty^* \times A/\phi_0 \times A/\phi_1 \times A/\phi_0 \times A/\phi_1 \times \dots$$

Cantor-Bernstein theorem

For every $n \in \mathbb{N}_0$, let ϕ_n/θ_n be the complement $(\theta_{n+1}/\theta_n)^*$ of θ_{n+1}/θ_n in the lattice $\text{Con}_{\mathcal{K}}(A/\theta_n)$. Then ϕ_n is a factor \mathcal{K} -congruence of A . Under the isomorphism $A/\theta_n \cong A/\theta_{n+2}$, ϕ_n/θ_n corresponds to ϕ_{n+2}/θ_{n+2} . Hence

$$A/\phi_n \cong (A/\theta_n)/(\phi_n/\theta_n) \cong (A/\theta_{n+2})/(\phi_{n+2}/\theta_{n+2}) \cong A/\phi_{n+2}.$$

It is easily seen that $\phi_j \circ \phi_k = \nabla_A$ for all $j \neq k$. Now, the property \mathcal{P} implies that $\phi_\infty := \bigcap_{n \in \mathbb{N}_0} \phi_n$ is a factor \mathcal{K} -congruence of A and

$$A/\phi_\infty \cong \prod_{n \in \mathbb{N}_0} A/\phi_n \cong A/\phi_0 \times A/\phi_1 \times A/\phi_0 \times A/\phi_1 \times \dots,$$

whence

$$A \cong A/\phi_\infty^* \times A/\phi_\infty \cong A/\phi_\infty^* \times A/\phi_0 \times A/\phi_1 \times A/\phi_0 \times A/\phi_1 \times \dots$$

Cantor-Bernstein theorem

For every $n \in \mathbb{N}$, ϕ_n/θ_1 is a factor \mathcal{K} -congruence of A/θ_1 since $\phi_n \supseteq \theta_n \supseteq \theta_1$. We have $(\phi_j/\theta_1) \circ (\phi_k/\theta_1) = \nabla_{A/\theta_1}$ for $j \neq k$. Since A/θ_1 fulfils \mathcal{P} ,

$$\psi/\theta_1 := \bigcap_{n \in \mathbb{N}} \phi_n/\theta_1$$

is a factor \mathcal{K} -congruence of A/θ_1 and

$$A/\theta_1 \cong (A/\theta_1)/(\psi/\theta_1)^* \times \prod_{n \in \mathbb{N}} (A/\theta_1)/(\phi_n/\theta_1).$$

Obviously, $\psi = \bigcap_{n \in \mathbb{N}} \phi_n$ and so $\phi_\infty = \psi \cap \phi_0$, where $\phi_0 = \theta_1^*$ as $\phi_0/\theta_0 = (\theta_1/\theta_0)^*$ in $\text{Con}_{\mathcal{K}}(A/\theta_0)$ and $\theta_0 = \Delta_A$. Further, let

$$\psi^\natural/\theta_1 := (\psi/\theta_1)^*.$$

Then

$$A/\theta_1 \cong A/\psi^\natural \times \prod_{n \in \mathbb{N}} A/\phi_n.$$

Cantor-Bernstein theorem

For every $n \in \mathbb{N}$, ϕ_n/θ_1 is a factor \mathcal{K} -congruence of A/θ_1 since $\phi_n \supseteq \theta_n \supseteq \theta_1$. We have $(\phi_j/\theta_1) \circ (\phi_k/\theta_1) = \nabla_{A/\theta_1}$ for $j \neq k$. Since A/θ_1 fulfils \mathcal{P} ,

$$\psi/\theta_1 := \bigcap_{n \in \mathbb{N}} \phi_n/\theta_1$$

is a factor \mathcal{K} -congruence of A/θ_1 and

$$A/\theta_1 \cong (A/\theta_1)/(\psi/\theta_1)^* \times \prod_{n \in \mathbb{N}} (A/\theta_1)/(\phi_n/\theta_1).$$

Obviously, $\psi = \bigcap_{n \in \mathbb{N}} \phi_n$ and so $\phi_\infty = \psi \cap \phi_0$, where $\phi_0 = \theta_1^*$ as $\phi_0/\theta_0 = (\theta_1/\theta_0)^*$ in $\text{Con}_{\mathcal{K}}(A/\theta_0)$ and $\theta_0 = \Delta_A$. Further, let

$$\psi^\natural/\theta_1 := (\psi/\theta_1)^*.$$

Then

$$A/\theta_1 \cong A/\psi^\natural \times \prod_{n \in \mathbb{N}} A/\phi_n.$$

Cantor-Bernstein theorem

For every $n \in \mathbb{N}$, ϕ_n/θ_1 is a factor \mathcal{K} -congruence of A/θ_1 since $\phi_n \supseteq \theta_n \supseteq \theta_1$. We have $(\phi_j/\theta_1) \circ (\phi_k/\theta_1) = \nabla_{A/\theta_1}$ for $j \neq k$. Since A/θ_1 fulfils \mathcal{P} ,

$$\psi/\theta_1 := \bigcap_{n \in \mathbb{N}} \phi_n/\theta_1$$

is a factor \mathcal{K} -congruence of A/θ_1 and

$$A/\theta_1 \cong (A/\theta_1)/(\psi/\theta_1)^* \times \prod_{n \in \mathbb{N}} (A/\theta_1)/(\phi_n/\theta_1).$$

Obviously, $\psi = \bigcap_{n \in \mathbb{N}} \phi_n$ and so $\phi_\infty = \psi \cap \phi_0$, where $\phi_0 = \theta_1^*$ as $\phi_0/\theta_0 = (\theta_1/\theta_0)^*$ in $\text{Con}_{\mathcal{K}}(A/\theta_0)$ and $\theta_0 = \Delta_A$. Further, let

$$\psi^\natural/\theta_1 := (\psi/\theta_1)^*.$$

Then

$$A/\theta_1 \cong A/\psi^\natural \times \prod_{n \in \mathbb{N}} A/\phi_n.$$

Cantor-Bernstein theorem

Since ψ^\natural is the complement of ψ in $[\theta_1, \nabla_A]_{\text{Con}_{\mathcal{K}}(A)}$, we have $\psi^\natural = \psi^* \vee \theta_1 = \psi^* \vee \phi_0^* = (\psi \cap \phi_0)^* = \phi_\infty^*$ where ψ^* is the complement of ψ in $\text{Con}_{\mathcal{K}}(A)$. Hence

$$\begin{aligned} A/\theta_1 &\cong A/\psi^\natural \times \prod_{n \in \mathbb{N}} A/\phi_n = A/\phi_\infty^* \times \prod_{n \in \mathbb{N}} A/\phi_n \\ &\cong A/\phi_\infty^* \times A/\phi_1 \times A/\phi_0 \times A/\phi_1 \times A/\phi_0 \times \dots \end{aligned}$$

which together with

$$A \cong A/\phi_\infty^* \times A/\phi_0 \times A/\phi_1 \times A/\phi_0 \times A/\phi_1 \times \dots$$

yields $A \cong A/\theta_1$.

Cantor-Bernstein theorem

Since ψ^\natural is the complement of ψ in $[\theta_1, \nabla_A]_{\text{Con}_{\mathcal{K}}(A)}$, we have $\psi^\natural = \psi^* \vee \theta_1 = \psi^* \vee \phi_0^* = (\psi \cap \phi_0)^* = \phi_\infty^*$ where ψ^* is the complement of ψ in $\text{Con}_{\mathcal{K}}(A)$. Hence

$$\begin{aligned} A/\theta_1 &\cong A/\psi^\natural \times \prod_{n \in \mathbb{N}} A/\phi_n = A/\phi_\infty^* \times \prod_{n \in \mathbb{N}} A/\phi_n \\ &\cong A/\phi_\infty^* \times A/\phi_1 \times A/\phi_0 \times A/\phi_1 \times A/\phi_0 \times \dots \end{aligned}$$

which together with

$$A \cong A/\phi_\infty^* \times A/\phi_0 \times A/\phi_1 \times A/\phi_0 \times A/\phi_1 \times \dots$$

yields $A \cong A/\theta_1$.

yields $A \cong A/\theta_1$.

Theorem

Let A and B be two algebras in \mathcal{K} satisfying the condition \mathcal{P} . If

$$A \cong B \times C \quad \text{and} \quad B \cong A \times D$$

for some $C, D \in \mathcal{K}$, then $A \cong B$.

Proof: Let $A \cong B \times C$ and $B \cong A \times D$. Then $A \cong A \times D \times C$. Let θ_1 and θ_2 be the congruences on A corresponding, respectively, to the projections $p_1: (a, d, c) \mapsto (a, d)$ and $p_2: (a, d, c) \mapsto a$. Then $\theta_1 \subseteq \theta_2$ and $A \cong A/\theta_2$. Hence by the last lemma we have $A \cong A/\theta_1 \cong A \times D \cong B$.

Cantor-Bernstein theorem

... for basic algebras

The condition \mathcal{P}

If $\{\theta_i \mid i \in I\}$ is a countable set of factor \mathcal{K} -congruences with $\theta_i \circ \theta_j = \nabla_A$ for all $i \neq j$, then

- 1 $\theta_\infty := \bigcap_{i \in I} \theta_i$ is a factor \mathcal{K} -congruence,
- 2 $A/\theta_\infty \cong \prod_{i \in I} A/\theta_i$.

In basic algebras, the factor congruences correspond one-one to the central elements:

The condition \mathcal{P} for basic algebras

If $\{a_i \mid i \in I\}$ is a countable set of central elements such that $a_i \wedge a_j = 0$ for all $i \neq j$, then

- 1 $a_\infty := \bigvee_{i \in I} a_i$ exists and is a central element,
- 2 for every $\{x_i \mid i \in I\} \subseteq A$ such that $x_i \leq a_i$ for all $i \in I$, the supremum $\bigvee_{i \in I} x_i$ exists.

Cantor-Bernstein theorem

... for basic algebras

Cantor-Bernstein type theorem

Let A, B be basic algebras satisfying **certain conditions**.

If

- $A \cong [0, b] \subseteq B$ for some $b \in C(B)$ and
- $B \cong [0, a] \subseteq A$ for some $a \in C(A)$,

then $A \cong B$.

The condition \mathcal{P} for basic algebras

If $\{a_i \mid i \in I\}$ is a countable set of central elements such that $a_i \wedge a_j = 0$ for all $i \neq j$, then

- 1 $a_\infty := \bigvee_{i \in I} a_i$ exists and is a central element,
- 2 for every $\{x_i \mid i \in I\} \subseteq A$ such that $x_i \leq a_i$ for all $i \in I$, the supremum $\bigvee_{i \in I} x_i$ exists.

Cantor-Bernstein theorem

... for CBA's and EBA's

A basic algebra is **orthogonally σ -complete** if there exists the supremum $\bigvee X$ of every countable subset X such that $x \wedge y = 0$ for all $x \neq y$.

Theorem

Let A and B be orthogonally σ -complete commutative (or effect) basic algebras. If

- $A \cong [0, a] \subseteq B$ for some $a \in C(B)$ and
- $B \cong [0, b] \subseteq A$ for some $b \in C(A)$,

then $A \cong B$.
